

Pivot Tables

1. Project Name: Food Sales and Important Insights
2. Your Name: Kristine Steele
3. Date: 1/14/2026

4. Data Domain: Retail Food Sales
5. Data Source: Course Provided Data Set- Food_Sales.xlsx
6. Clickable Data Source: [Food_Sales.xlsx](#)

7. Number of Data Columns: 8
8. Number of Data Records: 244

9. Summarize each data feature/column in a table:

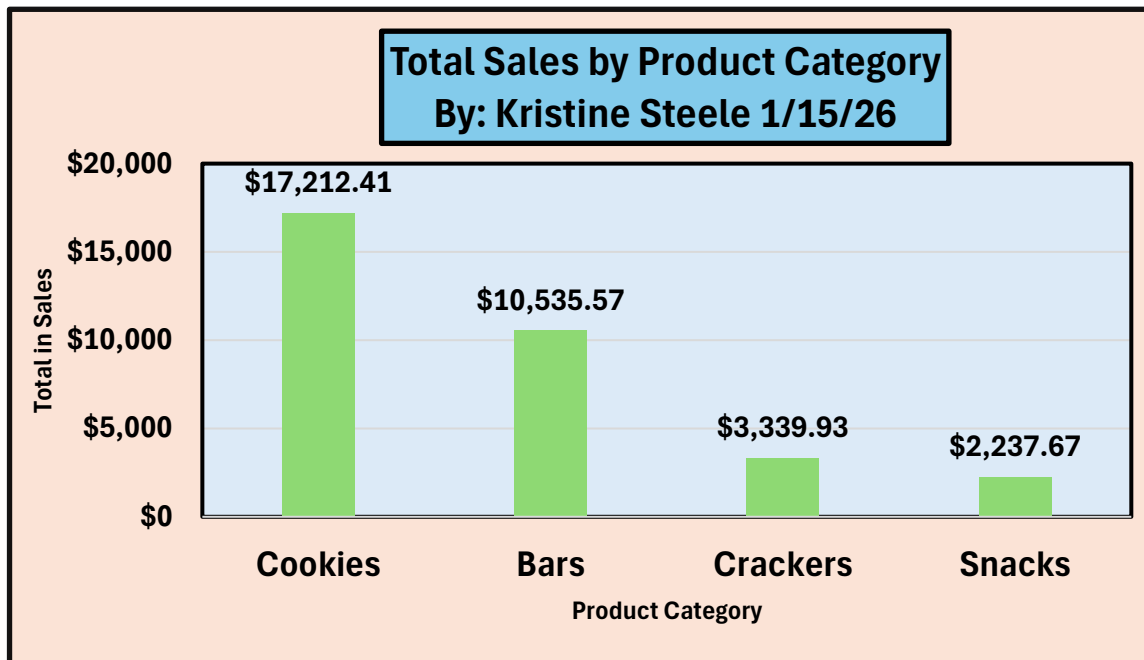

Column Name	Description
OrderDate	Date the order was placed
Region	Geographic sales region
City	City where the sale occurred
Category	Type of product (bars, cookies, etc)
Product	Specific items sold
Quantity	Number of units sold
UnitPrice	Prices per unit
TotalPrice	Total sale amount (product x unit price)

10: Describe any Assumptions: The dataset accurately reflects all sales transactions for the time period provided.

11. Goal 1: Identify which product category generates the highest total sales
12. Goal 2: Determine which products sell the highest quantities
13. Goal 3: Compare sales between regions and major cities to see where sales are highest

Goal 1: Identify Which Product Category Generates the Highest Total Sales

Row Labels	Sum of TotalPrice
Cookies	17212.41
Bars	10535.57
Crackers	3339.93
Snacks	2237.67
Grand Total	33325.58

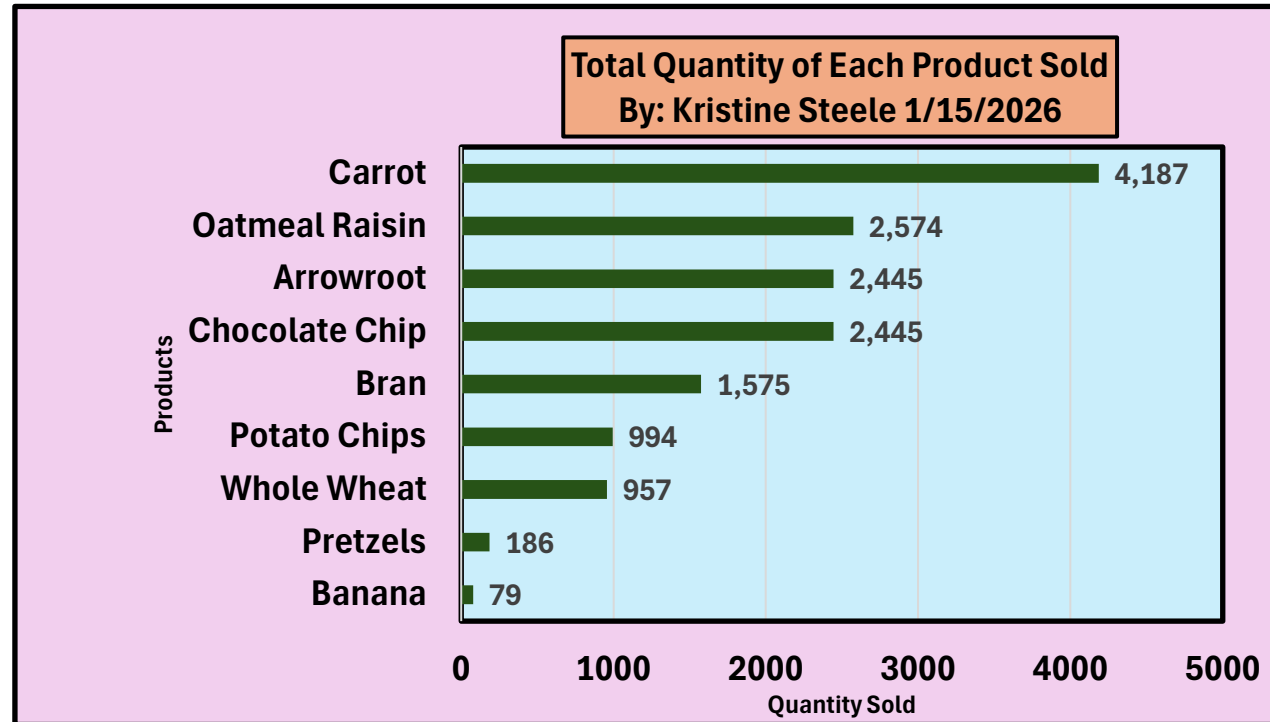

Data Story- Best Selling Category? Cookies Drive it Home!

The analysis of total sales by product category reveals that Cookies significantly outperform all other categories, generating \$17,212.41 in revenue—representing over 51% of the total sales of \$33,325.58. Bars rank second with \$10,535.57, while Crackers and Snacks contribute substantially less at \$3,339.93 and \$2,237.67 respectively. The clear dominance of Cookies suggests strong customer preference for this category, indicating it should remain a focal point for inventory management and marketing efforts. The considerable gap between the top two categories and the bottom two also highlights potential opportunities to increase sales in the underperforming Crackers and Snacks segments.

Goal 2: Determine Which Products Sell the Highest Quantities

Row Labels	Sum of Quantity
Banana	79
Pretzels	186
Whole Wheat	957
Potato Chips	994
Bran	1575
Chocolate Chip	2445
Arrowroot	2445
Oatmeal Raisin	2574
Carrot	4187
Grand Total	15442

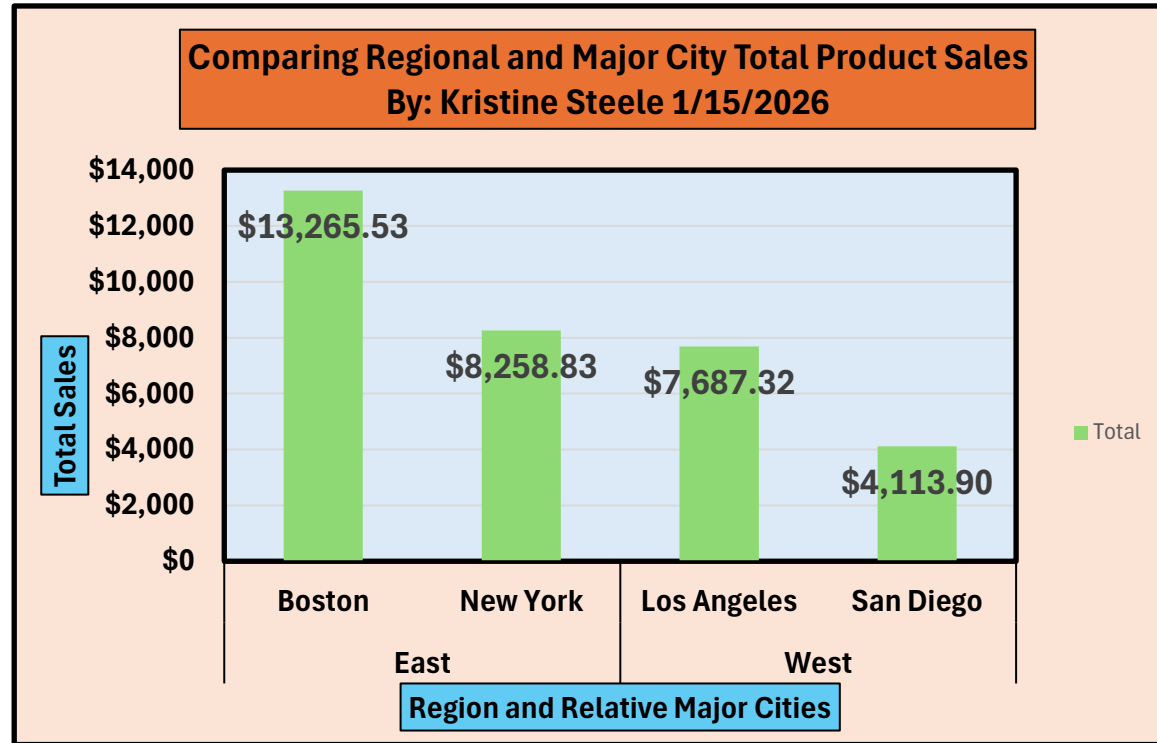

Data Story-Best Selling Product? Carrot Takes the Win!

Carrot clearly stands out as the top-selling product, with more than **4,000 units sold**, far surpassing every other item. A second tier of strong performers includes Oatmeal Raisin, Chocolate Chip, and Arrowroot, each selling between **2,400–2,500 units**. Mid-range products such as Bran, Potato Chips, and Whole Wheat show moderate demand, while Pretzels and Banana sold the fewest units overall. This distribution highlights a strong preference for Carrot and several cookie varieties, suggesting that these products drive the highest volume in total quantity sold.

Goal 3: Comparing Regions and Major Cities to See Where Products Sell Best

Row Labels	Sum of TotalPrice
East	21524.36
Boston	13265.53
New York	8258.83
West	11801.22
Los Angeles	7687.32
San Diego	4113.9
Grand Total	33325.58

Data Story - East Sales Nearly Double the West, Why?

The regional analysis reveals a significant disparity in sales performance, with the East region generating **\$21,524.36** in total sales—nearly **double** the West region's **\$11,801.22**. Within the East, Boston emerges as the dominant market with **\$13,265.53**, accounting for **62%** of the region's performance, while New York contributes **\$8,258.83**. In the West, Los Angeles leads with **\$7,687.32**, and San Diego generates **\$4,113.90**. While the East, particularly Boston, clearly drives the majority of revenue, this analysis raises important strategic questions: why are sales in the West so much lower than the East, and would it be more profitable to reallocate those selling resources to additional East region markets, or is there an alternative way to boost sales in the West through targeted marketing and product optimization?
